The Performance quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-800-544-6060.

Investment Strategy

The Fund seeks to achieve its investment objective by investing in U.S. listed securities with market capitalization within the range of the targeted benchmark, the Russell 2000 Index. Under normal circumstances, the Fund invests at least 80% of its assets (plus the amount of any borrowings for investment purposes) in small cap companies. At any given time, the Fund may hold up to 15% of its assets in American Depositary Receipts (ADRs). Typically, the Fund invests in approximately 40-60 stocks that pass the Investment Manager's stringent quantitative and fundamental criteria.

Notes + Important Disclosures

You should carefully consider the investment objectives, potential risks, management fees, and charges and expenses of the Fund before investing. The Fund's prospectus contains this and other information about the Fund, and should be read carefully before investing. You may obtain a current copy of the fund's prospectus by calling 1-800-544-6060.

Annual Operating Expenses: Per the most recent prospectus, (1) Fund total operating expense ratios are: Class A, 1.63%;

Class L, 2.38%; Institutional Class, 1.38% and (2) Fund net annual operating expense ratios are: Class A, 1.41%, Class L, 2.16%, Institutional Class, 1.16%. The net annual expense ratio takes into account contractual management fee waivers that are in effect until May 31, 2023.

Russell 2000 Index is an index measuring the performance of approximately 2,000 small-cap companies in the Russell 3000 index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000 serves as a benchmark for small-

cap stocks in the United States. You cannot invest directly in an index. Unmanaged index returns do not reflect any fees, expenses or sales charges.

Investing involves risk, including loss of principal. There is no guarantee that this, or any investment strategy, will succeed. Small and mid-cap investing involves greater risk not associated with investing in more established companies, such as greater price volatility, business risk, less liquidity and increased competitive threat.

Morningstar ratings are based on risk-adjusted returns and do not take into account the effect of sales charges and loads. © 2023 Morningstar, Inc. All Rights Reserved. The information contained: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete, or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

The Morningstar Rating for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life sub accounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Definitions of Terms:

Standard Deviation - Standard deviation is the most common measure of variability and is frequently used to determine the volatility of financial instruments and investment returns. Standard deviation is a statistic that measures the dispersion of a dataset relative to its mean and is calculated as the square root of the variance

Downside Risk - an estimation of a security's potential loss in value if market conditions precipitate a decline in that

security's price. Downside risk is a general term for the risk of a loss in an investment, as opposed to the symmetrical likelihood of a loss or gain.

Beta - measures the expected move in a stock relative to movements in the overall market. A beta greater than 1.0 suggests that the stock is more volatile than the broader market, and a beta less than 1.0 indicates a stock with lower volatility.

Alpha - the excess return of an investment relative to the

return of a benchmark index

R-Squared - measures the relationship between a portfolio and its benchmark index. It is expressed as a percentage from 1 to 100. R-squared is not a measure of the performance of a portfolio. Rather, it measures the correlation of the portfolio's returns to the benchmark's returns.

Sharpe Ratio - The Sharpe ratio is a measure of risk-adjusted return. It describes how much excess return you receive for the volatility of holding a riskier asset.
